

ADVANCED TECHNOLOGY.....

From the world's largest chain manufacturer

TSUBAKI		Each chain is pre-stretched at the factory to reduce elongation and lengthen wear life. Each chain has perfect cylindrical bushings. Each chain quality quad-staking riveting of the pin heads ensures max. resistance for push out force resistance		
SERIE	EXECUTION	ROLLER CHAIN	SELF-LUBE CHAIN	O-RING / X-RING CHAIN
SIGMA	XRG			X-ring provides less articulating friction and longer wear life. Attractive appearance gold colored outer plates.
	ORS			Exceptional strength and wear resistance, shouldered and projected bushings. O-ring seals and high viscosity grease (vacuum injected).
ALPHA	XRG			X-ring provides less articulating friction RELEASE 2004 Attractive appearance gold colored outer plates.
	ORS			O-Ring chain, superior durability and strength. Tested and proven on racetracks all over the world.
OMEGA	ORS			Economical O-Ring chain with high durability and strength.
DELTA	QRN		Bushings are impregnated with special oil. As the chain articulates, the oil is released to mini-mize friction, elongation and wear. Nickel plated.	
GAMMA	QRB	Economical high quality roller-chain. Critical components heat treated and shot peened for greater durability.		
MX PRO	SRG	Premium quality. Eliminates kinking and seizure in abrasive and muddy conditions through ceramic-coated pins and solid bushings. Attractive appearance gold colored outer plates.		
MX	QRB	Economical high quality roller-chain. Critical components heat treated and shot peened for greater durability.		

XRG = X-Ring Gold ORS = O-Ring Steel
 QRN = Quad Riveted Nickel QRB = Quad Riveted Black
 SRG = Spin Riveted Gold

Applying knowledge gained from racing, TSUBAKI has developed advanced engineering and production methods to assure superior chain performance and value
